COPYRIGHT STATEMENT

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted materials including foreign works under certain conditions. In addition, the United States extends protection to foreign works by means of various international conventions, bilateral agreements, and proclamations.

Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

The Columbia University Libraries reserve the right to refuse to accept a copying order if, in its judgement, fulfillment of the order would involve violation of the copyright law.

ARKANSAS

COTTON PRODUCTION IN ARKANSAS, 1928-1937

- By Counties -

The years of 1928, 1929 and 1930 were periods of expanding cotton acreage in Arkansas. In the year 1930 cotton plantings reached an all-time peak with an acreage of 3,577,000 acres in cultivation July 1. In 1933 the reduction program of the Agricultural Adjustment Administration brought the cotton acreage harvested in the State to the lowest point since 1921, and the program of 1934 further reduced acreage to the lowest point since 1915. Expansion of cotton acreage occurred in the years 1935, 1936 and 1937.

Yield per acre during the period has varied from 116 pounds in 1930 to 294 pounds in 1937. In 1930 a state-wide drought occurred during the growing season more severe than any previously recorded in the State, resulting in the lowest yield on record, with the exception of the very low yield made in the disastrous boll weevil year of 1923. Due to a very favorable growing season in 1931, especially the fall season, the yield was the highest since 1877. Yields since 1934 have been relatively high, due to increased use of fertilizer, lower weevil damage, relatively late falls, and the use of the better lands for cotton. The yield in 1937, with the exception of that of 1882, set an all-time record.

Production of cotton is expressed in 500-pound equivalent gross weight bales and has varied from 869,000 bales in 1934 to 1,904,000 bales in 1937. The small acreage was responsible for the low production in 1934, but the high production of 1937 was due to record yields.

In general, acreage, yield and production tended to vary in the counties in conformity with the State, although in some years significant departures occurred, particularly in yield per acre.

The estimates of production are based upon the ginnings within each county as reported to the U. S. Bureau of the Census with adjustments for cross-county movement of seed cotton.

The estimates of acreage planted are based upon the censuses of 1925, 1930, and 1935, available data from the Agricultural Adjustment Administration for the years 1933 to 1937, inclusive, and current reports from crop reporters relating to cotton acreage in each year.

The estimates of yield per acre are based upon yields computed from acres and bales reported to the census in census years and upon current reports from crop reporters relating to yield in each year.

The estimates of acreage planted and of yield per acre naturally needed to be reconciled with the estimates of production in such manner as to give a consistent series of estimates of acreage and of yield per acre.

Stuart L. Bryan,
Agricultural Statistician.
